SUMMARY

Final-year IT student with strong backend fundamentals, including REST APIs, data pipelines, and system reliability. Built 3+ production MERN applications, contributed 15+ PRs to open-source backends, and solved 800+ DSA problems. Familiar with SDLC processes and Agile/Scrum methodologies, with a basic understanding of CI/CD pipelines and software quality practices. Ranked 1st at the GDG Hackathon. Seeking SDE roles to deliver production-grade solutions.

EDUCATION

RMD Sinhgad College of Engineering, Pune B.E. in Information Technology, Current CGPA: 7.70	(2022–2026)
Vimalabai Garware Jr. College, Pune Percentage: 71.67%	(2020–2022)

TECHNICAL SKILLS

Programming Languages: Python, C++, React.js, JavaScript, Java.
Backend: Node.js, Express.js, RESTful APIs, JWT Authentication, Postman.
Database & Tools: MySQL, MongoDB, Git, GitHub, Docker, Linux.
Frameworks and Libraries: Flask, Django, Keras, Scikit-learn, Matplotlib, Seaborn.

EXPERIENCE

Open Source Contributor GirlScript Summer of Code 2025 – Remote	Jul 2025 – Sep 2025
- Contributed to MERN stack open-source projects, including EduHaven, SaraISeva, TravelGrid, and others during GSSOC'25. - Worked across frontend and backend, implementing UI/UX improvements and fixing critical backend API bugs to enhance overall system performance. - Merged 15+ PRs across 5 repositories, fixing 8 critical backend bugs.	

PROJECTS

MindScript: AI-Powered Blog App	Live Demo Github
- Built a full-stack AI blogging platform that automatically generates blog posts using Google Gemini API, reducing manual content creation effort. - Implemented secure authentication, protected routes, and CRUD operations for managing posts and user accounts. Tools Used: React.js, Node.js, Express.js, MongoDB, Google Gemini API, JWT Authentication.	
NexAnime: AI-Powered Anime Recommender	Live Demo Github
- Built a full-stack anime discovery platform with a FastAPI-powered hybrid recommendation system that delivers personalized anime recommendations based on genres, user preferences, ratings, and popularity. - It uses a hybrid recommendation system that combines Content-Based Filtering and Collaborative Filtering. Tools Used: React.js, Node.js, FastAPI, Python, Scikit-Learn, Pandas, NumPy, Tailwind CSS, REST APIs.	
Yojna Saathi: Scheme Application & Recommender	Live Demo Github
- Developed a full-stack grievance and service request management system to digitize complaint registration, tracking, and resolution for improved transparency and efficiency. - Integrated Cloudinary for scalable file storage, Nodemailer for automated email notifications, and developed an ML-based recommendation system (FastAPI) for personalized scheme suggestions. Tools Used: React.js, Node.js, Express.js, MongoDB, REST APIs, Cloudinary, Nodemailer, FastAPI, Python.	

ACHIEVEMENTS

1st Place – Competitive Coding Hackathon (2025) Organized by Google Developer Group on Campus, AISSMS COE Pune – built an innovative solution under strict time constraints.
2nd Place – Reverse & Blind Coding Event (2024) Techtonic, Sinhgad College of Engineering – demonstrated rapid logic building and debugging capabilities.
3rd Place – CodeChef Competitive Programming Contest (2025) Techtonic, Sinhgad – secured a podium spot by solving DSA problems with optimal time complexity.
Finalist – Multiple Internal College-level Hackathons Participated and ranked in various team-based tech competitions across semesters.

CERTIFICATIONS

Full-Stack Web Development – Apna College
Oracle Certified Foundations Associate – Oracle University
Postman API Fundamentals – Postman
